SUMMARY

Dynamic Fullstack Developer with a proven track record at Chain Academy, excelling in system architecture and blockchain integration. Expert in Rust,Typescript, and smart contracts, I deliver innovative, user-centric solutions while fostering cross-functional collaboration. My critical thinking and leadership skills drive project success and enhance product scalability.

SKILLS

- Typescript, Next.js and Tailwind Css
- React and Node.js
- API and full-stack
- Unit and integration testing
- Microservice architecture
- Git and Docker
- InfluxDB, PostgreSQL, and MySQL
- Solidity and smart contracts
- EVM L2s and Masumi Network
- ICP and Ethereum
- Security best practices
- Cross-functional collaboration
- Rust and Motoko

EXPERIENCE

Fullstack Developer
Chain Academy | Remote

05/2025 - Current

- Lead development of new products from initial architecture to deployment, implementing backend services, APIs, and user interfaces.
- Built and maintained full-stack applications, contributing to frontend, backend, and blockchain smart contract layers to meet project requirements.

- Design and implement responsive user interfaces, working from provided designs or independently defining UI structure.
- Contribute to backend architecture decisions, improving system reliability and scalability.
- Integrated blockchain functionality and smart contracts aligned with product architecture.
- Onboarded onto existing projects to debug, extend, and scale production systems effectively.

Backend Smart Contract Developer
Investa Farm

07/2024 - 12/2024

- Collaborated with clients and project teams to define project plans and scopes, ensuring alignment on objectives.
- Developed ideas from end to end, managing architecture setup and production rollout.
- Refactored and optimized existing codebases to ensure scalability and maintainability of prototypes.
- Engaged in daily stand-ups and strategic meetings to synchronize project timelines with client objectives.
- Contributed across the stack, delivering high-quality, user-centric solutions within deadlines.

Rust Developer
Carbon Crowd

03/2024 - 08/2024

- Developed and implemented canisters in Rust for icfootprint.io on ICP platform.
- Integrated backend canisters with frontend to ensure seamless data flow.
- Created new frontend elements to fully showcase canister capabilities.
- Maintained cohesive data flow between frontend, backend canisters, and InfluxDB database.
- Contributed to ongoing development and maintenance of backend systems using Rust.
